

Successful launch of Mobile AGM Voting

Computershare Netherlands together with its partner Lumi (www.lumiglobal.com) successfully launched mobile voting during the Koninklijke KPN 2017 Shareholders Meeting, followed by the PostNL AGM. Between 20-40% of the shareholders attending these AGMs made use of the App opposed to the original voting devices.

Innovation is also key when it comes to Shareholder Meetings and this was also recognized by one of the institutional investors during one of the shareholder meetings. Virtual meetings have the future and they were happy to see that these companies are the front runners.

Both retail and institutional investors made use of the app during the Shareholder Meetings and some retail investors who visited both meetings valued the fact that they could use the same app for multiple meetings during this AGM season.

Computershare Netherlands and its partner Lumi are looking forward to support our clients in the continued development of virtual shareholder meetings
